Subject: public comment on federal register - : boemre greed and bribe taking in the oil business

this regulation does not go far enough in regulating the greed of the oil and gas industry. they still have far too much free rein to cause another gulf of mexico disaster. there should be no dollars limit on any oil or gas operator to pay for the damage they cause. no dollar limit should ever be set on what they need to pay. this is a very lucrative business. they like to put all their clean up costs on the public. they still have not paid for th exxon valdez and this is 30 years later.

doi estimates on the cost of a future spill should be \$10 trillion dollars and the spills occur far far more frequently than every 26 years. somebody in doi is ignorant of reality. major spills happen every few years due to the venality and sloppiness of this industry. they get sloppier and sloppier as time goes on. these estimates are so far off the mark they constitute fraud on the american public. this is an industry based in lies and destruction and greed.

the oil/gas companies need to set up a clean up system that works. this was a complete fraud in the gulf of mexico which remains heavily polluted 7 months later and will continue to be polluted for decades.

all third party verifiers need investigations to show they are honest and truthful and capable. the signatures of those verifiers need to be taken making them personally liable for lies to the public. this regulations needs to be followed by ten more to regulate this destructive to earth industry that bribes federal employees, including mms and boemre.
