General Comment

Look no further than the oil spill in the Gulf of Mexico to see that we are dealing with an extremely sensitive topic here. The spill in the Gulf of Mexico this summer has showed us that more regulations need to be taken on protecting our environment. Some more care towards prevention could save us a lot more trouble than saving some time by omitting some regulations to prevent disaster. While we might live in a society that requires oil today and in the future; it does us no good to sit back and watch another oil spill disaster ruin our environment because we did not have enough regulations.
