General Comment

Dear BOEMRE,

Regarding non-competitive acquisition of an Outer Continental Shelf (OCS) renewable energy lease, although I strongly support renewable energy development, it is TOO CLEAR THAT THE RUSH TO CONSTRUCT renewable energy projects at all costs is being put above a reasonable and thoughtful review of the impacts of those projects on the environment, economy and coastal stakeholders. This is clearly seen in the case of the proponent-driven review of the Cape Wind project. This first step if it happens is an example of how to do it wrong which will benefit the developer at great harm to the natural environment and further add great unjust cost to electricity cost and taxpayers for subsidies needed to make this mistake take place.

I URGE YOU TO REJECT THE PROPOSED RULE.

This rule would decrease competition and create a process where developers would be able to grab areas in the OCS without having their proposals compete. In addition, the public review process to ensure the public's input would be greatly marginalized.

Please reject this rule.

Sincerely

Richard Frazee
